Activity 2h

Choose your chicken!

Wycheproof Chicken Club

<https://trinket.io/html/b6e9538dff>

Choose your chicken!

In this exercise you will be choosing four chickens, each with their own message.

First, think of a theme for your chickens and their messages.

Maybe it could be about keeping safe, like Slip, Slop, Slap.

Or maybe each chicken could be about the best food in town.

Or maybe each chicken could be named after one of your friends (or even teachers)!

Chickens usually have a lot to say!

Each page has some instructions on what to change.

For each chicken, choose a name and a message.

Name goes here

Message goes here

```
84 <body>
85 <h1 class="heading">Mycheproof Code Club</h1>
86 <div class="square cube">
87 <div class="square chicken1"><p class="top">Benny</p><p class="bottom">Strong and handsome</p></div>
88 <div class="square chicken2"><p class="top">Mildred</p><p class="bottom">The friendliest koala</p></div>
89 <div class="square chicken3"><p class="top">Henry</p><p class="bottom">Optimistic and caring</p></div>
90 <div class="square chicken4"><p class="top">Daisy</p><p class="bottom">The queen of the bush</p></div>
91 </div>
92 </body>
```

Change the color and size of the writing here.

Remember to change all four chickens.

```
24 .chicken1 {
25     position: absolute;
26     font-size: 12pt;
27     color:black;
28     border-color: black;
29     border-style: solid;
30     border-width: 2px;
31     border-radius:2px;
32     backface-visibility: hidden;
33     transform:translate3d(0px,0px,250px) rotateY(0deg) ;
34 }
35 .chicken2 {
36     position: absolute;
37     font-size: 12pt;
38     color:black;
39     border-color: black;
40     border-style: solid;
41     border-width: 2px;
42     border-radius:2px;
43     backface-visibility: hidden;
44     transform: translate3d(-250px,0px,0px) rotateY(270deg);
45 }
46 .chicken3 {
47     position: absolute;
48     font-size: 12pt;
49     color:black;
50     border-color: black;
51     border-style: solid;
52     border-width: 2px;
53     border-radius:2px;
54     backface-visibility: hidden;
55     transform:translate3d(0px,0px,-250px) rotateY(180deg) ;
56 }
57 .chicken4 {
58     position: absolute;
59     font-size: 12pt;
60     color:black;
61     border-color: black;
62     border-style: solid;
63     border-width: 2px;
64     border-radius:2px;
65     backface-visibility: hidden;
66     transform: translate3d(250px,0px,0px) rotateY(90deg);
67 }
```

Now choose your chicken. The names are chicken1.png, chicken2.png and so on up to chicken15.png.

Each chicken has a different expression.

```
84 <body>
85 <h1 class="heading">Mycheproof Code Club</h1>
86 <div class="square cube">
87   <div class="square chicken1"><p class="top">Benny</p><p class="bottom">Strong and handsome</p></div>
88   <div class="square chicken2"><p class="top">Hildred</p><p class="bottom">The friendliest koala</p></div>
89   <div class="square chicken3"><p class="top">Henry</p><p class="bottom">Optimistic and caring</p></div>
90   <div class="square chicken4"><p class="top">Daisy</p><p class="bottom">The queen of the bush</p></div>
91 </div>
92 </body>
```

The chicken name goes here on each line.

The name has to be like this

src = "chicken2.png"

You can choose chicken numbers from 1 to 15.

Now make the chickens spin.

```
18 ▾  
19  
20  
21  
22  
23  
    .cube {  
        position: relative;  
        margin:auto;  
        transform-style:preserve-3d;  
        animation: none;  
    }
```

animation: spin 10s linear infinite;

Put a border around each chicken.

Choose a nice colour
for the border

border-style can be:

dotted
double
groove
inset
outset
ridge
solid

```
24  .chicken1 {  
25      position: absolute;  
26      font-size: 12pt;  
27      color: black;  
28      border-color: black;  
29      border-style: solid;  
30      border-width: 2px;  
31      border-radius: 2px;  
32      backface-visibility: hidden;  
33      transform: translate3d(0px, 0px, 250px) rotateY(0deg) ;  
34  }
```

border-radius means
rounded corners.

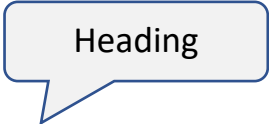

Try about 20px or more.

50% means a circle

border-width means
how thick is the border.

Try about 5px or more.

Change the heading to Wycheproof Chicken Club or something you choose.

```
96 <body>
97   <h1 class="heading">Wycheproof Code Club</h1>
98   <div class="square cube">
99     <div class="square chicken1"><p class="top">Benny</p><img src="" alt="chicken1" />
100    <div class="square chicken2"><p class="top">Mildred</p><img src="" alt="chicken2" />
101    <div class="square chicken3"><p class="top">Henry</p><img src="" alt="chicken3" />
102    <div class="square chicken4"><p class="top">Daisy</p><img src="" alt="chicken4" />
103  </div>
104 </body>
```

You can also improve the heading by changing the font-size and colour.

```
10 .heading {
11     font-size:14pt;
12     color:black;
13 }
```
