

Web Development – Introduction

Clip-path Exercise

CSS Clip Path

Modify clip01.html using

<https://bennettfeely.com/clippy/>

to create the web page shown

To assist with this exercise, below is the modified html of the body, which shows what classes are defined to apply the styles needed.

```
<div class="container">  
  <h1>Visit Singapore</h1>  
    
  <button class="btn btn-left">Attractions</button>  
  <button class="btn btn-right">Getting here</button>  
</div>
```

There are also styles for h1 and body.

.tri is the class that has the clip-path definition.

You may also need positioning and the z-index to get the correct layering.
